Risks of Tonsillectomy & Adenoidectomy

The patient understands that the following risks/complications are associated with the surgery and have been discussed with the patient.

Mass Removal & Biopsy

- Bleeding
- Throat Pain
- Hoarseness
- Changes in Your Voice
- Infection Requiring Antibiotics
- Adverse Reaction to Anesthesia; Medication to make you sleep during surgery can cause minor short-term problems, such as headaches, nausea, vomiting or muscle soreness. Serious long-term problems are rare.

Patient acknowledges that no guarantees were made.
